

Report for MDN Short Survey: Canvas API

Response Counts

1. What category would you say your use of the Canvas API falls into?
Check all that apply

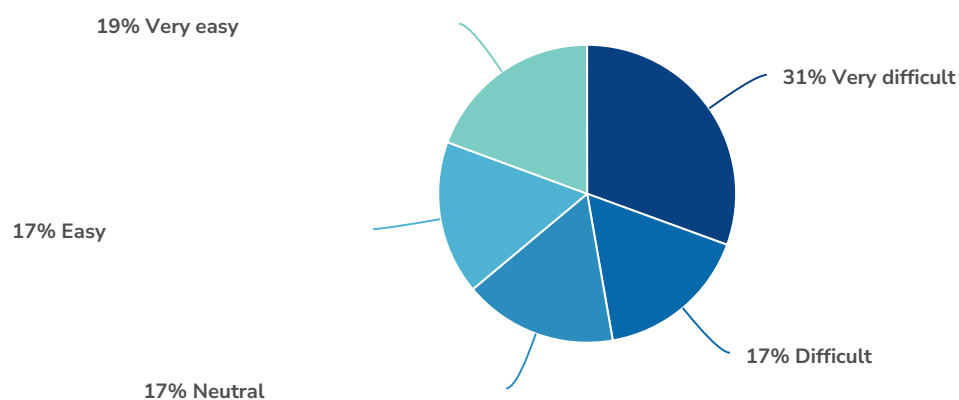

Value	Percent	Responses
Playing custom animations like Lottie or Rive	28.1% 	57
Charting & graphical information	49.8% 	101
Games	56.7% 	115
Creating an editor (e.g. photo editor or design tool)	43.3% 	88
Showing 3D models (outside of games)	35.5% 	72
Art	34.0% 	69
I'm not using the Canvas API	30.0% 	61

2. How would you rate the ease of use of canvas for Playing custom animations using Lottie or Rive? [Scale of 1-5]

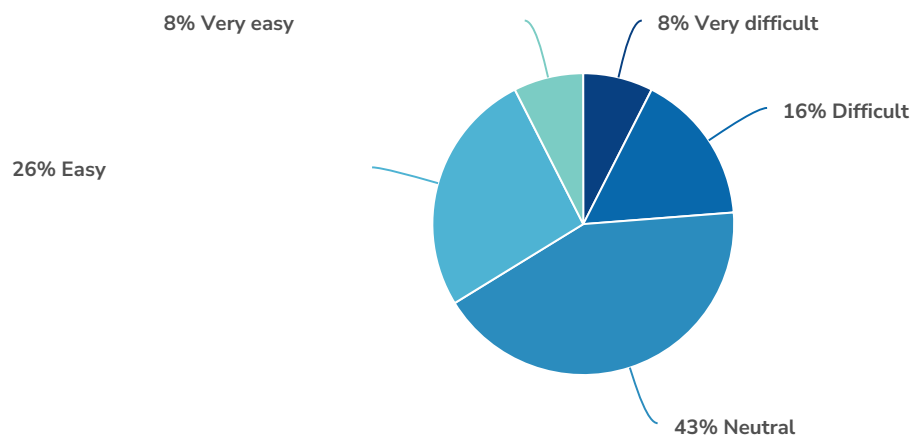

Value	Percent	Responses
Very difficult	30.6%	11
Difficult	16.7%	6
Neutral	16.7%	6
Easy	16.7%	6
Very easy	19.4%	7
		Totals: 36

3. How would you rate the ease of use of canvas for Charting & graphical information? [Scale of 1-5]

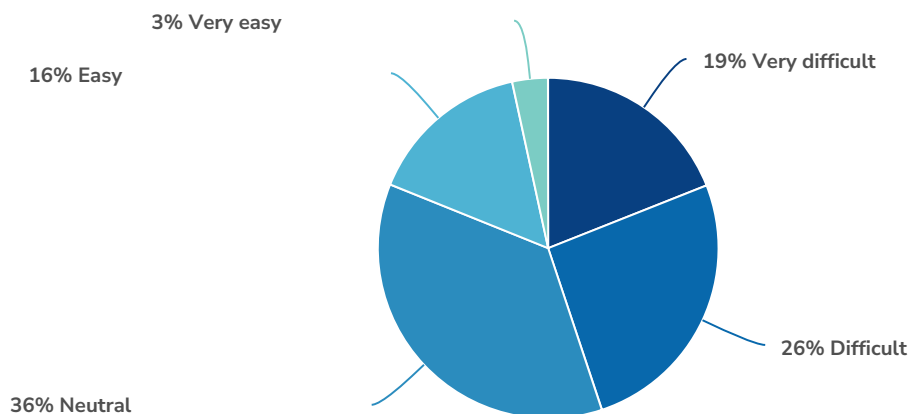

Value	Percent	Responses
Very difficult	15.6%	10
Difficult	23.4%	15
Neutral	26.6%	17
Easy	23.4%	15
Very easy	10.9%	7
		Totals: 64

4. How would you rate the ease of use of canvas for Games? [Scale of 1-5]

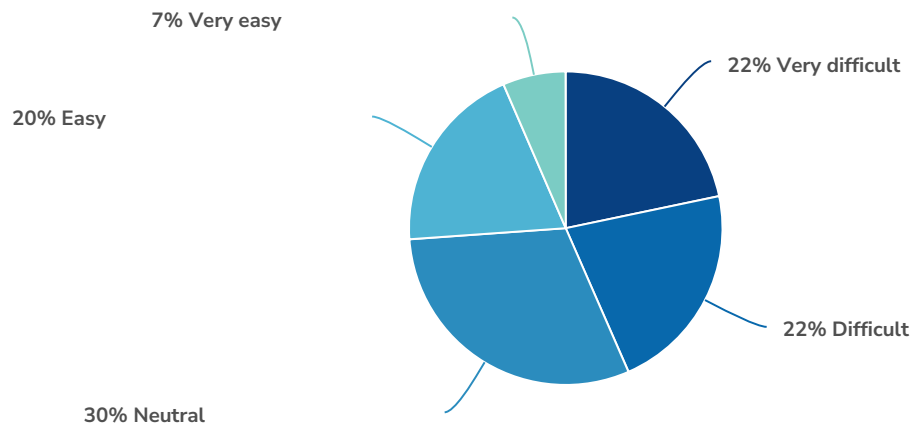

Value	Percent	Responses
Very difficult	7.5%	6
Difficult	16.3%	13
Neutral	42.5%	34
Easy	26.3%	21
Very easy	7.5%	6
		Totals: 80

5. How would you rate the ease of use of canvas for Creating an editor (ie photo editor or design tool)? [Scale of 1-5]

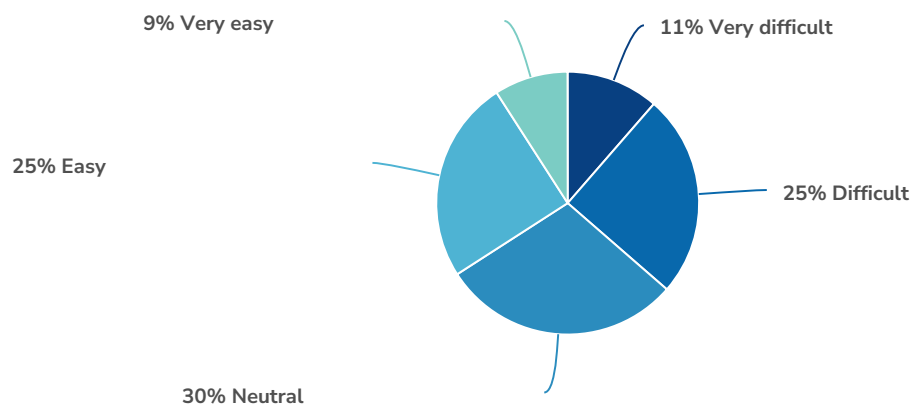

Value	Percent	Responses
Very difficult	19.0% 	11
Difficult	25.9% 	15
Neutral	36.2% 	21
Easy	15.5% 	9
Very easy	3.4% 	2
Totals: 58		

6. How would you rate the ease of use of canvas for Showing 3D models (outside of games)? [Scale of 1-5]

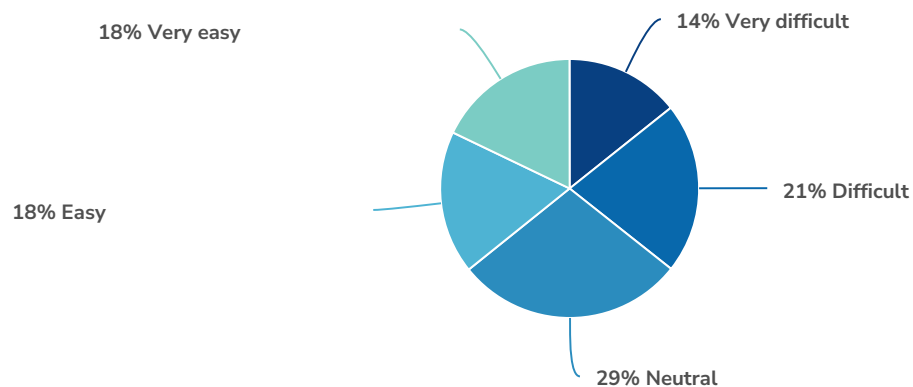

Value	Percent	Responses
Very difficult	21.7%	10
Difficult	21.7%	10
Neutral	30.4%	14
Easy	19.6%	9
Very easy	6.5%	3
Totals: 46		

7. How would you rate the ease of use of canvas for Art? [Scale of 1-5]

Value	Percent	Responses
Very difficult	11.4%	5
Difficult	25.0%	11
Neutral	29.5%	13
Easy	25.0%	11
Very easy	9.1%	4
		Totals: 44

8. How would you rate the ease of use of canvas for your specified use case? [Scale of 1-5]

Value	Percent	Responses
Very difficult	14.3% 	4
Difficult	21.4% 	6
Neutral	28.6% 	8
Easy	17.9% 	5
Very easy	17.9% 	5
		Totals: 28

9. Is there anything else you'd like to add about the ease of use when working with the Canvas API?

ResponseID	Response
12	Mbalenhlemthembu92@Gmail.com
16	CANVAS API ARE STILL COMPLEX IT CAN BE SIMPLE
23	Verify your phone number Google needs to verify your device or phone number for security reasons. Your carrier may charge for SMS messages or calls used for verifications. Standard rates may apply... uu06070@gmail.com
24	I wish the API threw more errors in lieu of returning nulls. I haven't found a case where I want to do anything other than fail if I can't get a context.
28	Basic device services are almost impossible to implement depending on the browser/Os. There is no way to tell the browser to let's say, I will handle all insets, drawfilling whole screen under system bars (at least not one that works consistently)
39	The chromium engine could use some optimization with the canvas api, as it is very hard to use on lower-end devices.
43	Especially for pixel art the image can look blurry or edges of pixel art images might not exactly appear like they should. This can be disabled but it's not obvious.

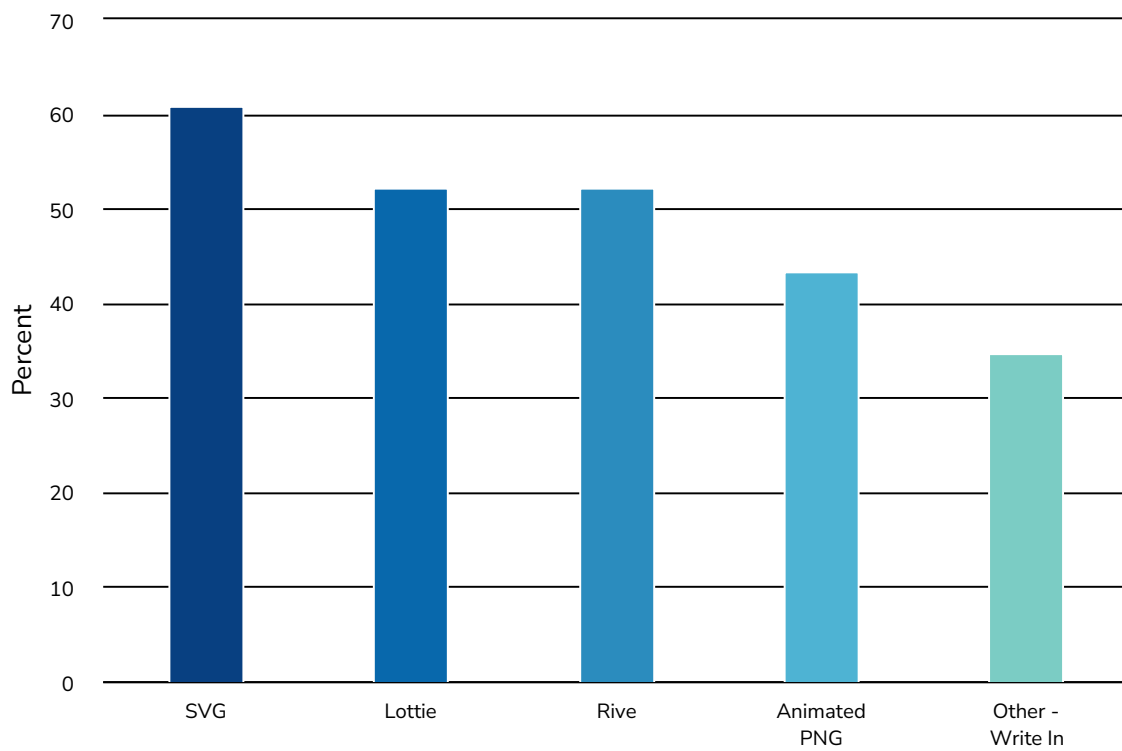

ResponseID Response

48	I detest the ellipse function; its interface is infuriating to work with. I ended up writing a couple of replacements (lineToEllipse, moveToEllipse, ellipseTo) that allow me to first go to the intersection of a previous primitive and the ellipse to draw and then draw that ellipse until the intersection with a next primitive, but I shouldn't have had to. The ellipse drawing functionality is badly designed.
49	A default interface for vector 2 and vector 3. And the normal math functions that help with vector math
51	VSWQ MR5L 473F N35P MIBE N5KP 2QDK 2ILO
54	flying 9 mm drone
64	Having element like svg for events
79	A lot of this is just the difficulty of WebGL. I'm using webgl 1 for a legacy application.
87	Cashbash
123	Maybe a programmable rendering cache list that can be applied to a canvas. Not entirely sure how exactly that could be implemented to have a performance boost without being too memory intensive.
130	https://www.youtube.com/@satoshiNakamotoInstitute
132	2D context is easy to use, WebGL is more difficult but that's mostly because I'm not that experienced with it.
138	pixel aspect ratio is challenging
145	I use echarts so not exposed to canvas problems other then the known zoom blurry problem which probably can be fixed by rerender after zoom
150	082256857145
153	The native canvas api without any external loibraries to work over it is hard to use, counterintuitive and lacks a lot of functionality. There are no built in methods for common things so evrything needs to be written yourself, which is annoying. Ofent times the behavior of some functionalities is questionable at best and does not do what it is supposed to do
158	It's difficult to add interactivity
159	(1..Mobile legends bang bang) (2.Tiktok)(3.Facebook
161	https://example.com/article/?id=62yhgt1a&campaign=902
162	DiGi

ResponseID Response

166	There is so much boilerplate to doing anything in the API. The manual setting of various properties before being able to draw things properly, the long instantiation (creating canvas, getting 2d context) needed to do even basic things.
169	Nope
170	It's nice to have WebGL
172	looking forward to webgpu
174	I want as many learning resources as I can find, and as stable an API as I can get for as many years into the future as I can have it.
177	The canvas API currently lacks support for robust text layout, although there currently is a proposal for it.
178	help me find a new job in the area of the business that will help me get a better understanding on how to make the rgt work in my area
187	Beber
193	Ok
211	Gz

10. What animation format do you use?

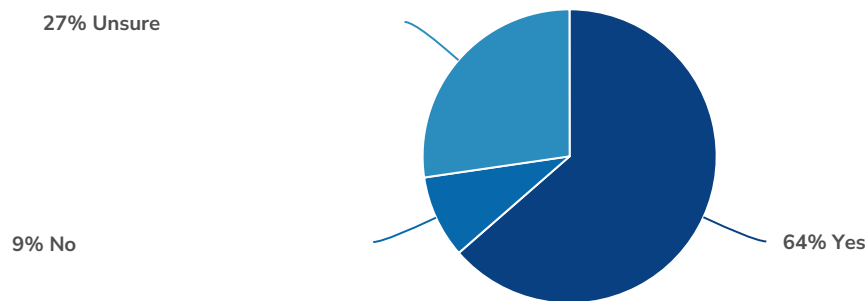

Value	Percent	Responses
SVG	60.9% 	14
Lottie	52.2% 	12
Rive	52.2% 	12
Animated PNG	43.5% 	10

11. Are there animations or specific animation features you cannot use effectively due to lack of performance or other reason (please specify)?

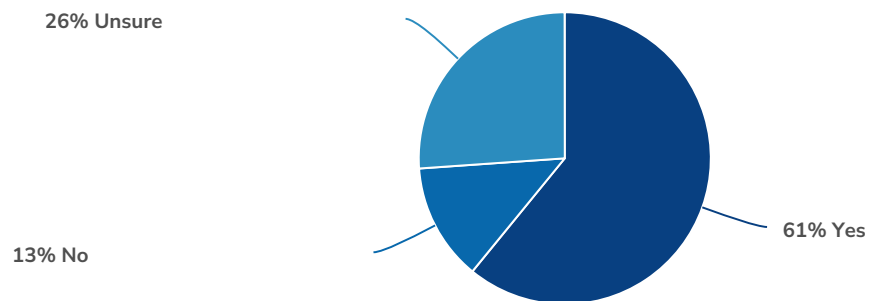

ResponseID	Response
23	uu2349597@gmail.com
26	The Lottie library is a sizable overhead and using the Canvas API is somewhat cumbersome.
33	Interactive stuff and playback control.
39	No way to modify objects already on the canvas.
53	Not particularly within the canvas api – there are certainly things I wish were more performant in other parts of the CSS/layout stack
150	082256857145
159	Yes
162	AaLd
169	How much money do I have in my account
187	Bebés
193	Me siento muy bien

12. If all browsers supported the Lottie format natively (no need to ship a JS player), would you invest the time to stop shipping the player approach and rely on browser support instead?

Value	Percent	Responses
Yes	63.6% 	14
No	9.1% 	2
Unsure	27.3% 	6
Totals: 22		

13. If just one browser supported the Lottie format natively (no need to ship a JS player), would you invest the time to stop shipping the player approach for just that browser?

Value	Percent	Responses
Yes	60.9% 	14
No	13.0% 	3
Unsure	26.1% 	6
Totals: 23
